

DEVOPS ENGINEERING

What Makes It Unique	DevOps bridges development and operations, enabling faster, more reliable software delivery through automation.
Why It Is Beneficial	It improves deployment speed, system reliability, scalability, and collaboration across teams.
Why We Need It Everyday	DevOps ensures that digital services remain available, secure, and continuously improving in a fast-paced world.
Services	CI/CD pipelines, cloud infrastructure, monitoring, automation, security integration, system optimization.
Skills	Linux, cloud platforms, Docker, Kubernetes, CI/CD tools, scripting, monitoring, security best practices.
